

EIZO IP DECODING MONITORS FOR SENSITIVE INFRASTRUCTURES

EIZO IP decoding monitors (available in 23- or 46-inch versions) with integrated image enhancement allow you to connect to security and surveillance cameras without a computer. They can be integrated perfectly with your existing security platform or your existing video management system (VMS)*. The monitors are designed for 24/7 use and boast exceptional reliability and longevity.

Simple & clean setup

As EIZO IP decoding monitors are an integrated solution, they only require a power supply and network connection to display a live stream of up to 16 cameras. The VESA attachment facilitates professional installation, and configuring the monitor is child's play with the remote control provided or the integrated Web interface.

VMS-independent fallback solution

VMS forms the basis for reliable video playback in modern VSS solutions. Even though the platform is protected from foreseeable events thanks to server redundancy, the VMS solution – establishing a connection to the operators via a client – should be seen as a critical point. If this system comes under attack or is disabled, the IP decoding monitors, which are independent of the VMS, can provide a redundant solution. To achieve this, it is simply connected directly to the surveillance cameras, the network connection of which is still operational.

Data protection and viewing of camera images

Sometimes live video is required, but storage of images is not allowed. The EIZO IP decoding monitors allow only for the live display of videos. Operators have no way of accessing or exporting video streams. Possible scenarios involve hospitals, prisons, public spaces, checkout counters, front desks and applications for the protection of people.

Edge recording and live video

Where a decentralized recording solution is used (such as edge recording with cloud archiving) live displaying is a challenge. Either software is needed, or streams need to be fetched from the cloud, generating additional traffic on your internet connection. With the EIZO IP monitor, it is possible to directly view live video from the cameras, completely separated from your recording solution.

First-class image quality

These monitors for video surveillance owe their outstanding viewing angle stability to a piece of innovative screen technology. This guarantees optimal image quality from every viewing angle. EIZO LCD monitors are equipped with antireflection coating. Thanks to a large dimming range, the brightness of the monitors can be optimally adjusted if they are viewed in dark environments or under changing lighting conditions.

Low TCO (Total Cost of Ownership)

IP decoding monitors are designed for zero-maintenance operation around the clock and are protected from unauthorised access. They do not require virus scanners, security updates, operating system maintenance or licences. This reduces maintenance expenditure considerably and prevents unnecessary downtimes as well as costs. The monitor has been designed for 24/7 use and boasts exceptional reliability. EIZO provides a two-year warranty.
